

FILTER CARTRIDGES SERIES WP

DESIGN

Good-value wound cartridge with center tube, providing a true depth filtration that becomes progressively smaller towards the center tube. Therefore larger particles are trapped in the outer zone and never reach the smaller inner openings. This depth filtration is resulting in high dirt holding capacity and longer service life for economical filtration. At the same time a high flow capacity at a low difference pressure is guaranteed.

APPLICATIONS

Both the string and the inner tube are made of pure polypropylene, which is perfectly resistant against many aceous, alkaline or aqueous solutions as well as many organic liquids. Due to the good value the filter cartridges WP are mainly used for all standard filtration applications in water treatment plants and in the plating industry. When being used for drinking water or for food and drug applications, the WP filter elements shall be rinsed after installation.

WP5P4.8

TECHNICAL DATA

Diameter: outer diameter 64 mm, inner diameter 27 mm
 Length: 4 7/8" to 40" (see table)
 Flow capacity: 0,5 - 1,5 m³/h per filter element 10". For multiple long elements (20", 30", 40") the flow capacity is proportionally higher. Especially if there is high load of dirt, "oversizing" of filter elements for having low flow and low initial difference pressure is recommended since this will superproportionally increase the service life.
 Difference pressure: Recommended initial difference pressure < 0,15 bar
 Recommended replacement of filter cartridge at approx. 2 bar difference pressure
 Operating temperature: max. 65 °C
 Retention rate: 5 to 200 µm nominal (see table)
